

# 3rd Annual SNAME Boat Design Competition

**Taking learning out of the classroom and into the world...**

<http://www.sname.org/SNAME/DesignCompetition/>

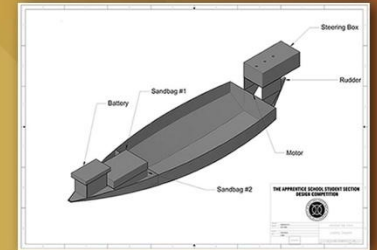

In our world of ever growing technology, the need for future naval architects, engineers, mathematicians, designers, inventors, and every person who finds science amazing, will be more critical tomorrow than it is today.

Going beyond the classroom and allowing students to use their math and science skills in real life application is the key to keeping young minds focused and intent on finding the solutions for future success.

The Apprentice School Society of Naval Architects and Marine Engineers Boat Design Competition is the opportunity of a life time for high school students.

## Key Dates
