

NEW CD SET TO BE RELEASED

SMALL-CRAFT PAPERS COMPILATION

The primary mission of the Society of Naval Architects and Marine Engineers is to facilitate the exchange of information and ideas, to disseminate the results of research, experience, and information, and to further education in naval architecture, marine, and ocean engineering. With this mission in mind the Society has compiled onto CDs SNAME papers selected by the SNAME Small Craft Committee that are relevant to the small-craft community. These papers have been culled from SNAME Transactions, *Marine Technology*, the *Journal of Ship Research*, and Section papers, from 1985-2003.

The resulting CD set will include hundreds of papers, organized with a linked index to enable papers to be located by author, title, original source, or subject. The CD set will provide users with real-time access to technical information and will eliminate the need for costly and sometimes time-consuming reproduction orders. By utilizing today's technology to fulfill SNAME's primary mission, members and non-members alike will benefit.

This endeavor, which is a first for SNAME, will serve as a model for CD sets serving other areas of the Society's members, including the offshore and commercial segments. The CD set will be ready for sale by mid-October, with a discounted price for SNAME members.

The Society of Naval Architects and Marine Engineers is an internationally recognized non-profit, technical, professional society of individual members serving the maritime offshore, naval and small craft industries and their suppliers. It administers and supports an extensive technical and research program in cooperation with government and regulatory agencies, scientific and research laboratories, academic institutions and the marine industry.
